

Technical Regulation Bulletin

No: TRBF3-2018-004
Date: October 2, 2018
Subject: Engine Oil Level

Minimum allowed engine oil level is at the “MIN” line on the Ligier JS F4 dipstick, available from Onroak. This dipstick, though labelled F4, also reads oil levels correctly for the F3 tank.

Checking procedure at technical inspection area will be as follows: The engine will be started and run at idle for one minute while the car is resting on the level scale pads in the technical inspection area. The engine will then be shut off and the oil level checked immediately, within 15 seconds of shutoff.

Oil must completely cover the line directly above the arrowhead at the “MIN” level on the dipstick. If the oil level is below the line at all, it will be non-compliant.
